Who are we ?

Microsystems Company is one of the leading companies in the field of information and communications technology, providing development services and integrated solutions to scientific bodies, industrial institutions, service sectors, and major commercial companies.

Microsystems was established in 1992 by a team of specialists, researchers and experts in the field of information and communications technology.

Since that date, the company has been making every effort to provide development services and integrated solutions to its clients from major bodies and institutions to keep pace with technological development, upgrade its products to compete with international companies, reach marketing goals and spread in foreign markets to achieve the target of export revenues , through systems. The information provided by the company plays a major role in advancing production, reducing product costs, and improving products.

Our policy:

We realize, as a result of the accumulated experience at Microsystems, that the customer needs a partner who can provide him with integrated, high-quality solutions at the lowest possible cost, and (Microsystems is this partner) , as our awareness of the customers' needs and priorities helped us implement the best possible solutions.

We do our best with the client to provide high-quality solutions at an economical cost from one source. This policy that we follow allows our clients to focus on their business without being confused about how to manage it.

Technical support:

and rapid technical support helps achieve the optimal use of systems and thus obtain the maximum return from the investments directed in these systems.

For this purpose, we have established an advanced technical support center located on the World Wide Web so that customers can access technical support from anywhere in the world in moments. We have also provided specialized engineers with the highest level of skill and training to respond to customer requests, whether received via the web. Or by phone via the support center hotline.

This investment is truly the main advantage of Microsystems, as the most severe obstacle facing the user is the search for how to manage and use the systems he owns .in the best possible way

Garage management:

Garage management systems must have the utmost speed and accuracy and the ability to continue without maintenance for a long time, as these systems operate throughout the day without stopping and are calculated based on fractions of the minute, and this .requires a system that works with technology)Real time .(

Microsystems Company offers a system that can manage any number of entry and exit gates and subscription accounts, whether monthly or daily hours. The system is also able to monitor the capacity of the garage and the current occupancy rate, which enables those responsible for managing the garage to have full control and optimal use of the facility.

Main features of the system:

- Determine the method of calculating the waiting time, whether by minute or hour
- Set prices for peak times and weekends
- Show the status of parking spaces in the garage, whether they are available or occupied
- Follow up and control shifts
- Managing monthly memberships of all types, whether for a full day or a specific number of hours
- Follow up on recording fines
- Dealing with electronic gates and printing tickets
- Accounts and storage management

Cairo, Egypt
Tel: +202 2505 4478
Fax: +202 2507 5413
Email: sales@microsystems-eg.com

Visitor categories:

- You can choose between subscription categories (one year, number of months .(month, or another period determined by a start and end date
- If the category is visitors, the calculation system can be chosen as (number of .(hours, per day
- The program supports the possibility of calculating the number of hours at a fixed hourly price throughout the day, or for each hour to have a different price than the other hour, such as during peak times. In the end, either the total number of each visitor's waiting hours is collected or the visitor is calculated according to the total number of waiting hours. Its waiting hours in general, as well as the possibility of .setting the price for each category if the price is fixed all days
- The system shows you the capacity of your garage and the ability to determine the . value of the fine applied in the event of losing your entry card or receipt
- Possibility of calculating the waiting fee according to the type of vehicle (bus .(minibus, private
- .The ability to choose from several different systems , such as the car housing

Cairo, Egypt
Tel: +202 2505 4478
Fax: +202 2507 5413
Email: sales@microsystems-eg.com

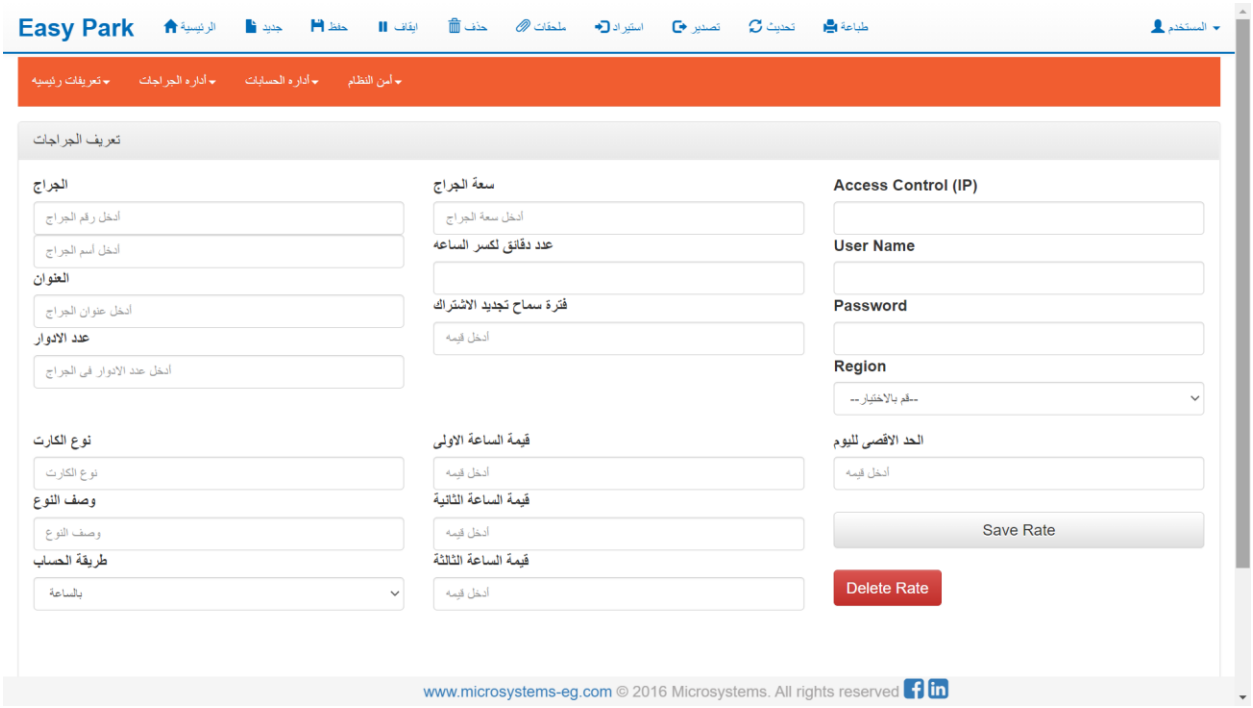
Definition of garage:

All details of the garage are defined, and the capacity of each garage to accommodate cars is determined, such as:

- Garage name
- Number of floors
- Garage capacity
- Card type
- Cameras



9211 st. ,El -Hoda, Mokattam
Cairo, Egypt
Tel: +202 2505 4478
Fax: +202 2507 5413
Email: sales@microsystems-eg.com

Cashier:

- Definition of an unlimited number of storage
- Possibility of setting restrictions automatically
- Possibility of linking storage to areas
- All cashier devices are identified located in the facility, linking them to the gates and determining the nature of each cashier device If it works to log cars in only, or to log cars out only, or to log cars in and out together
- Possibility of applying VAT on parking values or not
- The possibility of applying a discount percentage or discount value to the cashier or not applying it
- The possibility of setting the transaction based on (total garage capacity - total floor capacity) to know the number of remaining spaces in the garage when cars log in and out

Entry of cars:

The ability to know the number of remaining spaces inside the garage and the ability to choose the floor on which the car enters to wait.

The ability to write the name of the car driver, the color of the car, and the data of the car plate, whether they are numbers only or numbers and letters together.

The ability to log in and out of the car using the card system.

When any car leaves, the cash value required from the visitor appears automatically according to the duration of his visit and the value specified for him in the tariff.

The possibility of the visitor paying the monetary value required of him whether in cash or by visa.

The employee can know the remaining amount of the amount paid for the waiting period to avoid mathematical error.

When proof of entry, whether (card or receipt), is lost, a fine is paid, the value of which is determined from the parking tariff.

- The ability to view all account details in detail, such as the date and time of entry, the date and time of exit, and the waiting value

- The ability to specify the visitor's category when logging in or when logging out, and .his wait value will appear according to the category specified for him
